This research was conducted at Darul 'Ulum Lamongan Islamic University with an economics faculty population of 1,261 students, but this research used a sample of 93 students which was calculated using the Slovin formula. This research uses quantitative methods, which are processed with SPSS 26 to analyze several hypotheses between promotions, fashion trends and lifestyles partially and simultaneously influencing purchasing decisions and it is suspected that promotional variables have the most dominant influence on purchasing decisions.

The results of the analysis show that: (1). From the results of the t test, it is obtained that $t \text{ count} > t \text{ table}$ with a promotion value (X_1) of $9.420 > 1.662$. Fashion trend (X_2) $6.247 > 1.662$. Lifestyle (X_3) $4.989 > 1.662$. (2). From the results of the f test, it is obtained that $f \text{ count} > f \text{ table}$ with a value of $43.750 > 2.71$. So the hypothesis is accepted, which means there is a partial and simultaneous influence between promotions, fashion trends and lifestyle on purchasing decisions. From the analysis results, the promotional variable (X_1) has the most dominant influence on purchasing decisions.

From the results of this analysis, it is recommended that TikTok Shop apply the influence of promotions, fashion trends and lifestyle on purchasing decisions for TikTok Shop fashion products so that in the future TikTok Shop will have increasingly improved marketing quality.
